

Automatic Garage Doors Buyer's Guide

There are a range of options for garage doors and Access Control Automation Ltd have wide ranging experience in their installation.

We have therefore taken the opportunity of listing below some of the key questions you need to ask before making a decision to purchase.

- There are two types of tracking for up-and-over garage doors. Fully retractable doors (horizontal tracks) are easier to open manually and are more adaptable for automation using low cost operators. Canopy doors (vertical tracks on the door frame) are less expensive, easier to install but the automating of them is either more problematical or more expensive.
- Do you want a steel mass produced door (low cost)?
- Do you want a wooden clad garage door?
- Do you want a GRP (glass reinforced polyester) garage door for superb multi-style finishes (including wood effect) and low maintenance.
- Do you want traditional swing style garage doors?
- Do you want super-luxury garage doors?
- Do you want high-security garage doors?
- For the automation what is the anticipated level of usage?
- Be aware of safety issues!
- What happens in the event of a power failure?
- Do you need to add/change your garage door frame or prefer to have a door complete with its own frame from the door manufacturer?
- Is an electricity supply available or does it need to be installed?
- Do you want your garage door to 'add value' to the look of your property?

Access Control Automation can respond positively to all of the above as we offer a comprehensive range of solutions [see [Automatic Doors](#)] that can help us to provide the right system to match your exact requirements.
